

## Double filter

Main parameters:

|                    |                 |
|--------------------|-----------------|
| Model              | : ZHP-0.6       |
| Capacity           | : 600L per hour |
| Overall size       | : 500×200×450mm |
| Framework material | : SUS304        |

**Usage:** The double filter are used to filter fresh milk, sugar fluid, drink, liquid cement, Chinese medicine fluid etc to remove each kind of slight pellet impurity in liquid accurately. The two filtering drums can work simultaneously or carry on the filtration in turn, changing filtering net without turning off the machine, specially suitable in the continuous production. It has advantages like filtering quick, low cost, easy operation etc.

**Note :**  
Due to keeping innovation,  
the specification and  
Machine pictures or color  
are subject to alteration  
without notice!

## Carbon dioxide filter

|                    |                                           |
|--------------------|-------------------------------------------|
| Model              | : QJ-600                                  |
| Overall size       | : $\phi 250 \times 1000$                  |
| Material           | : SUS304                                  |
| Filtering material | : chameleon solution<br>and active carbon |
