

Four .Automatic barrel loader

After finish washing by external washing machines, the empty barrels are transported into automatic barrel loader by conveyor chain. After loads four barrels by counter, the barrel retaining cylinder works and stops others barrels entering into. Then barrel

pushing cylinder works and pushes barrel into barrel overturn frame and then recover into initial state, subsequently, barrel overturn cylinder works and turns over bottle to level and inserts barrel supporter. Cylinder of barrel washing spindle works and empty barrel moves into next working position along with chain and forms into inverted state. And then barrel overturn cylinder and barrel retaining cylinder are back to initial state and starts new loading process.

FIVE .automatic washing, filling and capping machine units
