

Automatic washing, filling and capping machine units is main equipment for the 5 gallon barreled drinking water filling production line. It is made up of frame, water tank, pipeline, water pump, pneumatic cylinder, transmission, and electrical apparatus and so on. It accomplishes washing, filling and capping motion. it comes true stabilized washing effect, accurate filling volume and seal cap pressing effect by the way multi-passes washing processes, filling volume and automatic sorting and capping and full computer control.

Working principle:

1. Washing process :

The rinsing has seven processes: the first washing step is sterilizing water, the second washing step is the second of sterilizing water again, the third washing step is drop water off ; fourth washing step is circulation sterilization water ; fifth washing step is the second of circulation sterilization water; the last two steps are purified water washing. After rinsing, it will have ten minutes to drop away water.

2. Filling process:

Note :

Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!
