

THE EQUIPMENT FOR FILLING MILK BEVERA

The equipment is mainly used for milk filling. It can conduct the Filling Process into different kinds of bottles on one machine and can also be used for the other beverage. The main frame machine adopts the automatic control technology of PLC and transducer with high degree of automatization. The dynamical system is connected by transmission shaft with stable performance. The filling principle of micro negative gravity increases the precision. The advanced automatic lubricating system requires no manual effort and increases the life span of the machines. The noise is low and the overall machine is easy to maintain.
