

Mesin Pengemasan Kopi Full Otomatis

Step2 : Seal the drip coffe bag by the ultrasonic sealing

- The inner bag uses an ultrasonic cold sealing method, which is also a reflection of the value of the machine.
- The traditional heat sealing device requires a high temperature to seal the bag, and high temperature will affect the quality of the coffee powder, so ultrasonic sealing avoids this disadvantage and ensures the quality of coffee.

date coder 3lines max

Step 4: Seal the outer bag continuously

outer bag packing and sealing with date coder function
