

SSJ MODEL TUNNEL DRYING MACHINE

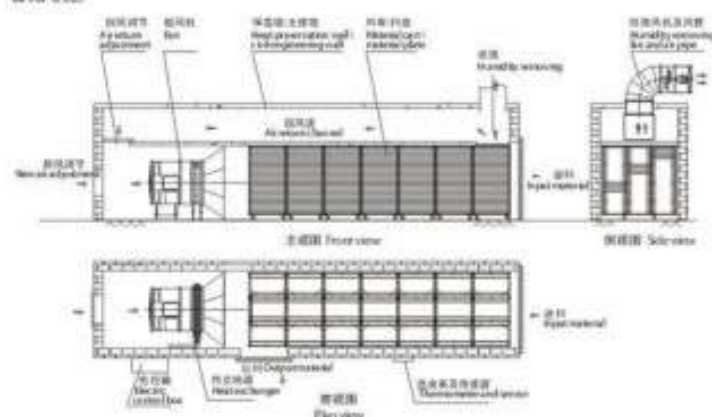

Working principle

After the air is exchanged by the heat exchanger, the air in the drying chamber is heated through heat radiation and heat convection. Under the function of fan, the hot air is diffused in the whole drying chamber and the hot air and materials carry out sufficient heat exchange. Under the function of humidity removing fan, the vapor is discharged outside the drying chamber so as to achieve the purpose of drying.

Technical features

The SSJ Model tunnel drying machine is featured by large loading volume and simple operation. It is mainly suitable for drying dehydrated vegetables, fruit products, agricultural and sideline products, instant foods and Chinese herbal medicines. It is especially suitable for drying materials of big size, materials requiring long drying time and materials having high requirements to appearance, such as Chinese mushroom, mushroom, wonton, prawn and etc.

Note :
Due to keeping innovation,
