Instruction and features:

The machine is designed and further improved on the base of original full automatic capsule filling machine from both home and abroad. With high technology and exclusive performance, it has reached international leading level. It is ideal equipment for capsule and medicine in pharmaceutical industry which is in full compliance with GMP requirements.

It adopted PLC programmable controller, step less frequency inverter, man-machine interface to operate and touch screen display (Type A&B is a Touch Panel operation). With fault or lack of material, the machine will automatically alarm and shut down, and eliminate automatic alarm after troubleshooting. NJP series capsule filling machine owns functions of password input, parameter setting, data printing, resetting. All the key pieces of the drive shaft and the cam shaft for the machine are adopting the imported materials.

Good-looking appearance, exquisite workmanship, ease of operation, simplicity of use. Filling seat and measuring plate are designed as one unit to make measuring plate and filling rod without deviation, avoid friction between filling rod and measuring plate, improve its precision, furthermore, it enhances the machine's life greatly. Ineligible capsule can be eliminated automatically, the medicine in the capsule can be recycled and be reused, and thus it can improve greatly the economic efficiency.

Simplicity and convenience of dismantling, installation and clean, various models of mould can be replaced (the mould of 800 model and 1000 model as well as 1200 model can be replaced mutually on the same machine) (and the mould of 200 model and 400 model as well as 600 model can be replaced mutually on the same machine) to meet different capacity requirements.
