

Bucket conveyor

It sends the high temperature melting material mixed from the dispersion kneader to the materials forced feeder of the single screw to reduce the workers' work intensity. It is made up of electromagnetic braking motor driving system, in order to make the feed hopper to move up and down on the track. At the end of the stroke, there is sensitive controlling switch, to make the conveying safer and simpler. The main frame of this device is welded by carbon steel, and the bucket is made of stainless steel, it can carry 100 Kgs materials one time.

Power of electric motor : 3.0KW
Size of bucket : (stainless steel) L1000mm×W850mm×H400mm
Dimension : L3200mm×W850mm×H2200mm
weight : 500kg
