INJECTION SYSTEM

- ★ Material first in first out by injecting from mold joint face. It assures material stay in barrel with very short time Which will prevent rubber be vulcanized before injection.
- ★ low speed and high torque hydraulic motor driving screw directly. Suitable for rubber in different viscosity and hardness.
- ★ Multiple stages injection speed and pressure can be set as necessary.
- ★ Precise detection of metering stroke, plasticizing screw lower down rotating speed before stopped to ensure accuracy.
- ★ Computer control vulcanizing temperature and time.
- ★ Only changing a few parts can mold solid silicon rubber and banding rubber materials.

CLAMPING SYSTEM

- ★ Three-step molding closing device, the lower height of mold joint face is easy for operation.
- ★ Finite Element Analysis ensure the rigidity of all key structural parts, thus maximizes the machine quality and its service life.
- ★ Low pressure mold closing for mold protection
- ★ Computer control the mold vacuum and exhaust.
- ★ Three-stage speed and pressure setting for mold closing and opening.
