

Rubber Tiles Vulcanizing Line

Rubber tiles is a kind of recycled rubber as a raw material, a new type of surface decoration materials through a high temperature and appropriate pressure. Rubber tiles are colored by the post-treated rubber particles coated with adhesive mixture, and then pressed. Mainly used for outdoor, used indoors. Rubber tiles made of two different densities of material composition, colorful surface with fine powder or small plastic colored wire and through a special process, while the lower coarse powder or pellets, made of plastic wire.
