

DOUBLE SPIRAL BIG CALIBER PLASTIC DRAINAGE PIPE MATERIAL PRODUCTION LINE

Application:

At present domestic polluted water and drainage pipes are mostly made of cement. But due to its un-steadily chemistry cyprus and loose connection, it has been the principal factor of environment pollution. The coined iron pipe is not suitable for use because of discomfort construction, high price and other shortcomings. In recent years, using plastic pipes to take the place of cement pipes has been a success, newly big caliber spiral pipes have been taken into great account and been the renewal and updated products of cement pipes and coined iron pipes which has a great prospect in the market. In the head of technology, in particular of craft-design. The machine adopts the high efficiency single spiral extrude technology. The predominance spiral pole is derive from German technology, it can guarantee the high speed and quality extrude. It adopts complicated mechanic head, double combiated machine to provide material and spiral writhe. The constitution is nice and design is special. It can guarantee the high quality of the products. The machine is controlled by the advanced PLC computer, easy operation and steadiness. Connection of special pipes.
