DOUBLE-WALL CORRUGATED PIPE EXTRUSION LINE

This production line is composed of two high-efficiency single-screw extruder, imported ratio-adjusting valve, double-passage spiral composite extrusion molds, vertical forming machine, spray cooling tank, double-blade radial cutter and stacker.

Features :

Stable extrusion, excellent plastization the mold surface is nitrogenized and polished, and with double-wall thickness regulating device the forming machine and extruding mold work together to achieve the vacuum forming technology and extruder pipe online belling the whole production line adopts plc microcomputer control system, can display the pictures such as the melting temperature, compressure, forming speed, alarming, ect directly, and has memory function.
