

Drip Irrigation of Tiny System

DGD Series Drip Irrigation Production Line

Drip Irrigation line is used to produce single wing labyrinth water conveying belt on the base of polyolefin. It is widely used in warm room, farm and so on.

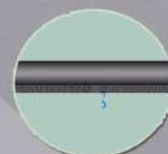

Features and application

1. The production line adopts high efficiency extruder, swift net changer and screw plastic blowing head.
2. Specially designed vacuum composite forming die to ensure the accuracy and composite density.
3. Unique measurement device and scale huff to ensure the precise of products.
4. Extruder and haul off adopt AC frequency conversion technology.
5. Temperature is adjusted by temperature control meter to realize PID control.
6. The production is controlled by PLC and equipped with human-computer interface, all the technical parameters can be set on the touch screen.

Note :
Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!

Main Technical Parameter

m/min	24-38
mm	φ 16
mm	0.16 0.18
mm	200 300 400
m	500-2000
kw	32
