|                                                                                                                                                                            |                                |                                                                                                                                                                             | (set)    |                                                                                                                                                                                                                                                                                                                             |
| <br>     | Box Feeder                     | Production capacity : 20~40 m3/hour<br>Power : 3 kW<br>Slot-size : 650*3500mm<br>Belt running speed : 3-5 m/min<br>dimension : 4050*1680*1180 mm<br>weight : 1320 Kg        |          | box Feeder is one of feeder's equipments which balances and rations the materials that you feed in. By adjusting the height of flashboard and the speed of conveyor belt, it will control the quantity of feed-in raw materials, balance pug and internal combustion material proportionally, and crush the large soft mud. |
|                                                                                          | ironing separator              | Dimension : 600*500*150mm<br>weight : 140 Kg                                                                                                                                |          | Remove any iron part from material                                                                                                                                                                                                                                                                                          |
|                                                                                         | Double Roll Crusher (No Tooth) | Production capacity : 25-55 m3/hour<br>Power : 11/7.5 kW<br>Feeding size : ≤ 25 mm<br>Roller specifications : 700*500mm<br>dimension : 3350*1150*1050mm<br>weight : 2400 Kg |          | Roll Crusher applies to crush the clay, shale, limestone and other medium hard materials. This machine can adjust the gap between the cross collar in accordance with the size of feed-in materials                                                                                                                         |
| <br> | Double shaft mixer             | Production capacity : 25-55 m3/hour<br>Power : 30 kW<br>Effective length of mixing : 2800 mm<br>dimension : 4500*1550*860 mm<br>weight : 2800 Kg                            |          | Double Shaft Mixer can mix and squeeze raw materials with water adequately in order to blend, homogenize, mix and enhance the plasticity and molding capability of the raw material. And it is a necessary equipment to deal with the raw material while in the procession of sintering the bricks.                         |
