

Cone Crusher H Series

Cone crusher is mainly used for secondary or tertiary crushing in mining and quarry industries, especially for hard stones with compress resistance below 250 Mpa like limestone, quartz, dolomite and granite. It features with high capacity and crushing ratio. We mainly have 3 types cone crusher as S(SG) series, PG series and H series cone crusher. H series uses grease seals instead of water seals used by spring cone crusher to have a good seal effect. As long as change of lubricant is timely, the mixing of grease and water is forbidden hereon. Meanwhile, it adopts a new type of thin oil lubrication station with large flux and air-condition cooling to replace the one with small flux and water cooling so that the machine can get good lubricating effects and longer service life. H series has got a national patent with the patent No.: ZL200820052700.5

Specifications :

1. Material made of Manganese steel.
2. Lubrication oil sealing system.
3. Hydraulic cavity clear-up.
4. Strong crushing ability.
5. BV/ISO9001:2008.
6. Energy-saving, low pollution with advanced technology.
7. Material Releasing Hydraulic Jack System.
8. Bowl Clamping Hydraulic Arrangement System.
9. CSS Adjustment Hydraulic System.
10. Both Lubrication and main motor electrical control Panel.
11. Hydraulic Power control system All Hose Pipe in the system.
12. V-Belt Driving and Coupling Connection are both available.
13. Hydraulic and lubricating pump one set each in spare.
14. All Cylinder seal kit one set each.

Note :

Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!
