

**Main shaft**

Forged from hardened and tempered chrome molybdenum steel  
Particularly large diameters to suit heavy-duty application

Cone and mantle plate, High manganese steel castings.

High quality copper socket liner can bear high crushing load, and allows the machines working under rigorous working condition.

High quality spring and overload protection.

Oil film seal, ensure the machine works well.

Main shaft can distribute the lubrication oil to each high performance bearings.

**Pinion gear and Bull gears** with high strength and high precision are adopted to ensure the reliable operation of equipment.

**Drive shaft assembly** is supported by the bronze shaft sleeve, and the entire assembly can be dismantled for convenience of maintenance.

Multi-point control of an independent lubrication system to ensure that the machine bearings lubricated dual protection, and automatic machine can achieve security

**Note :**  
Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!
