

GAS GENERATOR SET

300 and 320 series gas generator is one type of middle speed gas internal combustion generator. Different types of gas may be used. Comparing with conventional gas genset, they're characteristic of high efficiency, low exhaust temperature, simple operation, easy maintenance and stable running.

With the function of automatic/manual control, electronic speed control, automatic fault monitoring, automatic shut-down and etc, JAE gas generator may even be operated efficiently in long time under poor working conditions. Power range from 400-1500KW. High power output, lower emissions, lower life cycle cost (LCC), flexible gas application, gas generator set is widely used in gas (natural gas, biogas, coal gas, oil fired gas, coke oven gas, blast furnace gas, coke gas, producer gas, biomass gas and other heat value greater than 800Kcal/Nm gas) power generating.

Gas generator has the following characteristics:

- (1) Lifespan: more than 20 years
- (2) on-line rates up to 8000hours/year
