

### Product introduction

Strong jaw crusher is the most suitable for the broken compressive strength which is not higher than 280 Mpa :ore and rock, slag, etc, and the most large degree materials must not be more than technical parameter table set rules.

It is Mainly used in metallurgy, mine mountain, chemical engineering, cement, construction, refractory materials and ceramic industries as well as broken and finely various kinds of hard rocks and ores, etc.

Vipeak heavy industry is the world's leading on rocks and minerals processing equipment production enterprise, JC jaw crusher with its superior performance and stable and reliable quality, pursue high quality equipment has the trust of customers! JC jaw crusher is the first selection of high efficiency and crushing equipment!

### Working principle

The crushing Way of Europe Jaw crusher is driving and extrusion. Its working principle is: Motor drives belt and pulley, the movable plate is bobbing up and down front and back through the eccentric shaft, when the movable plate moving to the fixed plate, the material being crushed or broken split. When movable board and plate are under the function of back of partiality axis and spring, previously the split materials which has been crushed or broken will be discharging from the mouth of the lower part of the board. With the motor turns continuously and movable plate for a periodic pressure broken and excretion, to make sure that the capacity in line will be big and bulk.
