

In order to solve such problems of the existing jaw crushers as low production efficiency, difficult installation and maintenance, we are introducing a new generation of energy-saving jaw crusher series (H-JC / Hydraulic Jaw Crusher). All indexes of this jaw crusher on structure and production efficiency present advanced modern technologies. At present, this series of jaw crusher is the ideal coarse crushing machine at the market.

Hydraulic Jaw Crusher

- ① Motor installation
- ② equipment fixed
- ③ installation basis

compare with Other common Jaw Crusher

Other common Jaw Crusher :

1. The motor and the main unit are installed separately, and the installation space is large.
2. using large-size anchor bolts, need to be watered twice.
3. the basic design is complex and it will make Installation time.
4. The installation space is bigger than usual, so it will make the Infrastructure investment cost higher than the Hydraulic JC.

Hydraulic JC :

1. The motor is directly installed on the host.
2. Replace the rigid anchor bolt with elastic limit block and rubber damping device.
3. The basic design is simple and it will make Installation time and cost are reduced by approximately 50%.
4. The installation space is small, it will make Infrastructure investment cost is reduced by about 30% than usual jaw crusher.
