

Classifier introduction

Our company has independently developed this new generation series of classifier, which introduces the foreign advanced technology, and it features simple structure, reliable and easy in operation. Actually, the classifier has four types: high weir single and double spiral, immersed single and double spiral classifiers.

High type weir type: the top of the spiral vane is above the overflow surface, and the spiral center is under the overflow, mainly applied in classifying the size between 0.83-0.15mm. Immersed type: all the spiral vanes immerse under overflow surface, mainly applied in classifying the size between 0.15-0.07mm.

Features and benefits

1. Large output, low energy consumption, high classifying efficiency
2. The granularity is concentrative distribution, high classification precision
3. Rational structure, strong applicability
4. High degree of automatic
