

High speed cut off saw with rotary table

**HCS-508
HCS-610**

ROTARY TABLE

- The table can be swiveled to right and left with maximum 45° angle. This allows for angular cutting.
- The table is equipped with a lock pin, allowing the table to fast position at 45°
- Table surface is precision ground

PRECISION, QUICK CLAMPING MECHANISM

The clamping mechanism is driven by an air cylinder in combination with the use of linear guide ways that exhibit fast and smooth clamping motions.

HCS-610 features:

- The machine uses $\phi 24"$ saw blade
- Cutting speed: 30~40 cuts/min
- The table can be swiveled to max. 45° rightward and leftward
- The clamping mechanism is mounted with linear guide ways.

IN FEED AND OUT FEED FENCE

- In feed and out feed fence surfaces are precision ground
- Equipped with an anti-bump rubber to prevent serious clamp bumping
