

Advantages of New Type

- A. To improve the feeding paper stability and change moulds more convenient. We use wider belt instead of two narrow belts. Narrow belt is easily abraded by papers. Also you should adjust the distance of two belts when you change the moulds. For wide paper, it is more endurable and don't need be adjusted.
- B. In order to feed paper more automatically, we use both PLC operations with photoelectric sensor and servo motor to control the paper feeding part. It has two.
1. It makes feed paper part easily operate when you change the moulds. The old design is adjusted by cam. When you change the different size of moulds, we need replace different size of cams. It is very complex and takes much time for change
 2. It makes paper feeding part more smoothly and fluently working. The old design is easily missing paper feeding when machine running.

- C. Automatic glue system is controlled by reduce motor from Taiwan. Glue point we use sponge point, which is easy to cut the shape to fit with different products needs.

- D. The frame of collecting box is separated into three parts, each part can be opened. It is easier for changing moulds or repairing.

- E. It adapts counting paper tape equipment to count product quickly and accurately.
