

Performance and Characteristics:

- The machine can finish multi processes one time (ALL IN ONE) such as: printing, slotting, creasing, trimming, corner cutting, punching, die cutting, stacking and so on.
- Machine is designed according to high request and reliable function, humanization operation, it can setting, revision, implement, changing and memories in short time, and display data accurately.
- All of drive rollers are made of high quality steel, hard chrome plated the surface with grinded.
- Main drive gears adopt high quality steel with heat treatment with grinded, adopt cross slip system connect each gear, keep gear fix position, ensure transmission precision.
- The main drive roller adopt keyless connect, decrease the connection gap, ensure printing precision.
- The machine adopts sealed spray lubrication for gear system, engineer oil automatic balance device; keep the oil level equal in each unit.
- Motorized digital phase adjustment with "automatic zero return" and "memories" function (options: PLC control with touch screen).
- The machine adopts lead edge (or kick feeding), low demand for the cardboard, fast.
- Main motor is VFD, working stability, low power consumption.
