Stump crusher is mainly used to crush tree stump and a bundle of straw etc. The old way of crushing tree stump: split tree stump into smaller diameter log and use wood chipper chipping to wood chips, but now only need one tree stump, and can get big working capacity.

Features:

1. This machine with rotating crusher which consist of basement, gear driving, rotating box and rotor.
2. Feeding door is in center offset with the feeding silo, the offset inlet combined with the driving lever of inner wall in the feeding silo to help further for raw material processing.
3. The hydraulic driving box can be rotated to max. Degree of angle to open the rotor for easy maintenance. Adopting multi-blades and rotor knives to make a complete crushing and reduce a cost of knife wearable.
