

WOOD CHIPPER "PRIMARY CRUSHER"

This machine makes fine, the processing technology is high, it uses the double-layer body, the machine body infuses the tap water to play the water cooling function, it also loaded a new material can get function of the sound insulation and the heat dissipation. Therefore, the noise of this machine is small and vibration-free in production and use. Beautiful appearance, durability and high output, 50% higher than the traditional wood powder machine efficiency, it is best ideal powder crusher production equipment currently.

HIGH SPEED PLASTIC PVC, PE, PET, EVA, WOOD POWDER PULVERIZER MACHINE

Brief introduction:

1. With water cycle and wind cooling, this plastic miller / pulverizer can be applied to process thermoplastic material. like PE/PVC/PC/PA/ABS, etc
2. Driven by the high-speed rotating air stream (partly eddy flow) which is produced by the high-speed rotating of the main shaft, the raw materials collide strongly with the board and the cutting blade, and was grinded into powder (without sieving).
3. Both the board and the blade are made of stainless steel, with excellent performance after heat treatment.
4. Slender body, Wonderful design, and Golden quality.
