

Pelletizer Series

Ball Shaper

Brief Introduction:

Ball Sharper adopts extrusion granulation, new technology of polishing shape ball, completely changed the big investment and complicated process such an old traditional granulation process: the fertilizer formation rate is above 95%

Brief Introduction:

Our company produces the disc pellet machine, has the advantages of simple structure, low cost, convenient maintenance. The raw material is grinded mixed and measured in crusher room. Belt conveyor transmit it to the disc room, adding material to shallow dish, the raw materials in the shallow dish are bonded by aspray adhesive bonding. The parcel rotate along with the rotation of the disc, increase gradually. Due to the disc has the ability of automatically classifying in the rotation, the large particles floating in the above, discharge from the bottom of disc, small particles and new material bonded, continue to glue together, grow up, until it is discharged.
