Usage and Working Theory

This model is developed with combination of Korea plastic weaving technology and Tsudakoma high-speed weaving machine. It is characterized by high speed, high efficiency, fine flatness of fabric, high density, wide application range, easy adjustment, low maintenance cost and low cost of labor and power.

The model is designed with plain and cam shedding, accompanied by single or double nozzle and electric feeder. It is mainly designed to produce plain and satin plastic fabric which is widely used to manufacture such packing material as collection bag, tarpaulin, woven bags and geotextiles.
