## Main Features

This model is designed and developed to cater the need of customers to produce high quality fabric at low cost, optimizing maximum profit to customer's investment. The high rigidity structure based on advanced design guarantees loom running at high speed, powerfully and with low vibration.

The model has string weaving potential up to 600kg of tension. It is suitable to produce medium. or high. density hydrophobic fabric. Production cost is reduced while it is able to produce high-added value fabric. yielding more profit to users. The professional design is based on current infrastructure, which means wide use of general parts and standard parts. What's more, professional system control and integrated mechanical and electric technology highly reduces production cost with no compromise on loom weaving function and stability.
