Benefits of Sheeting

Nanofiber, which absorbs oil more than 50 times its own weight, is called a groundbreaking new material of the third premium. It is. "Nanofiber" that sandwiches these nanofiber with non - woven fabric and molds them into a sheet. We have newly developed a "bar sheet making device".

Compared to the conventional oil adsorbent (commercially available), the nanofiber sheet molded by this device is 2 to 3. It has about twice the excellent oil absorption performance, and it is not only a general oil adsorbent but also a heavy oil spill accident. It can be used as an oil adsorbent or an oil recovery mat.

Furthermore, by combining a newly developed deoiling device separately, from the oil - adsorbed sheet. The oil can be degreased and recovered, and the sheet can be used repeatedly (reused).
