The automatic fish mask machine is a newly developed mask machine equipment. The equipment is used to produce KF94 mask products. The process flow is: 3-5 layers of material in a whole roll, machine-ultrasonic welding peripheral-rolling-folding--station welding-- rolling and cutting out the body--automatically turning the piece and conveying to the earband machine--welding left and right earbands--product output. This machine has a high degree of automation, touch-screen operation, and language support for Chinese, English, Korean and Japanese. Through PLC programming control, the mask can be embossed, folded in half, perforated, and trimmed at one time. The special manufacturing process, the texture is clear, and it is not deformed during production, which can greatly reduce material waste and can effectively ensure Mask quality. According to the different raw materials used, the masks produced can also meet different standards such as FFP1, FFP2, N95, etc. The earbands are elastic, making the wearer's ears comfortable, and the mask filter cloth layer filters well, which fits Asian faces. Suitable for high pollution industries such as construction and mining.
