Oil absorption performance and deoiling performance of oil adsorption sheet

Oil Adsorption Sheet

Adsorption State

Degreasing

Take Oil Status

From deoiling to recycling

The press - type deoiling device squeezes oil from the absorbed nanofibers. Oil can be recovered with high efficiency. Also push nanofiber are also maintained, although their oil absorption performance is slightly reduced. Can be reused as an oil adsorbent.

By using this press type deoiling device, the oil adsorbent can be used. It can be reused, and the generation and recovery of oil - contaminated waste can be suppressed. It also leads to a reduction in processing time. Problems caused by heavy oil spills the amount of secondary waste generated by oil pollution can be suppressed, and oil - water separation by doing so, it is possible to recycle the recovered oil.
