Accurate web quality control

- Instead of original mechanical weighting mode, proportioning valve controls to realize linearity booster, improve viscosity and ensure silver package quality.
- Cotton is rolled out by four rollers with varying diameters and arranged in an 'S' shape to achieve the ultimate evenness and smoothness in the web.

Advanced silver guide design

- With the passive silver guide, the silver is fed with proper angle to reduce breakage and tangling.
- Sensor can check and display no silver, stop silver and breakage individually to ensure the silver quality.

Proper drafting

- 2-over-3 curve drafting, 10-group data for changing. Drafting range is among 1.22-1.62.
- With pneumatic weighing, the drafting is reliable and stable.

Note:
Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!
