

Compact Farming Milling Miller

The Flour Mill Equipment of 120 tons per day compact wheat flour milling machinery are designed and installed together with the steel structure support. The main support structure is made of three levels: the roller mills are located on the ground floor, the sifters are installed on the first floor, the cyclones and pneumatic pipes are on the second floor. The materials from the roller mills are lifted by pneumatic transferring system. Enclosed pipes are used for ventilation and de-dusting. Workshop height is relatively low to reduce customers' investment. The milling technology can be adjusted to satisfy customers' different requirements. Optional PLC control system can realize central control with high degree of automation and make operation easier and flexible. Enclosed ventilation can avoid dust spill to keep high sanitary working condition. The whole mill can be compactly installed in a warehouse and designs can be customized as per different requirements.

Features of our Compact Mill

1. Our machine has passed the international quality standard and has no pollution.
2. Complete set of flour mill adopt various configuration modes for different choices.
3. Our engineers are ready to install the machine, which can ensure the machine operate efficiently and also ready for the after sales service call.
