

Vehicle Auxiliary System

■ DLQC-FZ014 Automotive Audio System Demonstrating Board

Basic configuration

- Audio assembly (including radio and DVD player), speakers, audio amplifier, automatic antenna, battery, training panel, ignition switch, ignition key, power switch, DC12 power, movable framework (with self-retention wheels), supporting manual and training guide book and other components

Training Content

- Audio system structure composition and working principle project training.
- Operate switch, complete audio system work process project training
- Audio system each circuit element voltage, resistance, signal detection project training.
- Audio system circuit diagram analysis project training.
- Audio system troubleshooting and exclusions training

Feature

- Real and operable audio system are used to illustrate structures and works of audio system.
- Switches of the audio switch group can be operated to demonstrate operation of system.
- A color circuit diagram on the instruction board is protected by 3mm-thick organic glass and fixed with aluminum rims. The diagram of audio system can help trainees learn and analyze the operating principle of these systems.
- The instruction board is installed with detection terminals to detect electric signals, for example, resistance, voltage, current, and frequency, of circuit components of the audio system.

Note :

Due to keeping innovation, the specification and Machine pictures or color are subject to alteration without notice!
