

PCM-12L(S),16L(S),20L(S) Straight Double Row Liquid Filling Machine

Linear PCM series double row filling machine, set light, machines, electricity, gas filling the integration of science concepts, the use of double turn into the bottle, turn the vertical filling automatic filling valve, double combo out of the bottle, in the The case of equal filling valve, can greatly increase the filling efficiency, unique design, reasonable structure, for a variety of shapes and a variety of free gas bottle liquid filling requirements

The main parameters:

1. filling heads: 12, 16 or 20heads
2. the human-machine interface operation decency
3. automatic time control measures
4. arbitrary regulation from 50ml-1500ml
5. filling accuracy: $\pm 0.5\%$ (250ml or more for example)
6. sensor automatic control of liquid feed
7. no bottles or short bottles are not filling (photoelectric sensor automatic control)
8. no drip

Application materials: free gas liquid with good mobility.

Application industries: pesticide, food, medicine, daily chemical and so on.
